**PROCESS FOR PRODUCING HIGH-STRENGTH POLYPYRROLE FILM**

Examiner: K. Han    SN: 10/536,940    Art Unit: 1795    November 17, 2008

***Election/Restrictions***

1.      Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claims 1-6, drawn to a process for producing polypyrrole films.

Group II, claims 7-10, drawn to electrodes with polypyrrole films.

2.      The inventions listed as Groups I and II do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: the special technical feature between groups I and II of using polypyrrole as a film on electrodes is well known. Tamamura et al. (US 4608129) discloses the use of a polypyrrole polymer film (Column 3, Lines 15-34; Column 5, Line 30- Column 7, Line 17) with a conductive electrode [Abstract]. Since the use of a polypyrrole film on an electrode is well known in the art a lack of unity between Groups I and II is present.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the

Art Unit: 1795

requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To preserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.
